

Any site video verification bypass

Well the game is easy, nothing much.

Install Crazytalk free software from internet or any similar 3D animator will work. Use the portrait picture which you used in DL.

From the crazytalk software you can make the face moving of a picture. Iâ€™m attaching 2 kinda video tutorial with this article.

Video tutorial:

1: https://youtu.be/y6NSEoPq_0Q

2: <https://youtu.be/CPMkAqoLCAM>

After that, export it or screen-record the moving face.

Now install manycam or similar software. They turn your webcam to any custom videos you need. Setup the manycam

(Some settings need to be done, you can learn from YouTube)

After that, add the face moving Video to manycam software

At verification page when it opens camera, manycam will work as the camera. you can use or set the picture or any video of your choice that you want to show/Verify with .

So while verification, when it ask for camera verification, manycam will open instead of webcam and will play the video or photo you inserted.

when you put face moving video, they will recognise as real and will verify you. Also to upload DL you can use the same way/method.

Thatâ€™s it, best of luck
